

Home

login

1. if user logged in then show Username and Logout in Navbar

2. if user not logged in then show Login and Signup in Navbar

3. if fill form for signup then first bcrypt the password and saved in data base

4 if fill form for login then first check email , if email is already exist in database then compare the password if password is matched then generate token..

5. Home:-

show all products and implement filter according to diagram

, if we choose any one product redirect to another page that is product detail page

5 Product Detail :-

there are two buttons 1 Add Cart 2 Buy Now

if i select Buy Now and user is not loggedin then redirect to login page and after login redirect to checkout Page and show user detail

if i select Add Cart then data added in cart..
